

Etnies Twitch 3

I truly believe that I have been sent the most comfortable shoes I have ever put on my feet, and that is no BS. There is plenty of new technology in these shoes, from the padded tongue and collar to the STI Foam Lite 2 footbed, and the 400 NBS double cup outsole that features an exposed EVA midsole.

What makes the difference to me with these shoes is the new Foam lite technology that allows for maximum comfort while providing you with a breathable moisture wicking material called Ortholite. This system reminds me of a memory foam bed; when you move your foot the insoles reform to your foot to provide you with maximum comfort.

If you are looking for a new pair of kicks, these come highly recommended.

Warp 9 Wheels

Warp 9 rims are the way to go when you want to pimp out your ride. You can even customize your own rims with the colours you want to suit your style. They even do coloured spokes now. Warp 9 is the only company that offers stainless steel brake rotors as well as an aluminum sprocket to come with your rims. These rims are super-light compared to your stock set-up, and they are fitted with the stock bearing sizes and spacing, so you do not have to worry about your rims not fitting.

The nice thing about these rims is that they come fully set up right to your doorstep, with the Anodized 7000 series aluminum rims, with the stainless steel spokes and nipples with an aluminum hub as well as the brake rotors and sprocket fully set up and ready to go! All you have to do is throw the rubber on and you are on your way.

Warp 9 not only specializes in rims, but also in many more items like anodized foot pegs and rads. So go and check out their awesome products at Warp9racing.com and see what goodies you might just order next!

Fly F2 Carbon Kinetic

The Fly F2 Carbon Kinetic helmet is a high-end helmet with a great price for a well put together helmet. The helmet is constructed with carbon fibre, Kevlar and fibreglass components, I feel safe knowing that this helmet can withstand greater forces than some of the past helmets I have owned.

One feature of this helmet that I really enjoyed was the venting right above the brow line of the helmet, which allows air flow through your goggles to help reduce fogging as well as keeping you cool.

The F2 Carbon Kinetic comes in a variety of colors to customize to your own personal look and style. The F2 Carbon is DOT and Snell approved to meet the regulations of most racing.

This helmet, it is also very light weight and that is something that most riders are looking for when purchasing a helmet this keeps stress off the neck especially during those long days of riding. So get out there and get yourself an F2 Carbon helmet, let me tell you, it's totally worth it.
